## Quality in a Home Use Doppler

Sealed controls are reliable and easy to clean

LCD display shows advanced heart rate calculation, battery level and volume level

Soft bumper protects probe

Gently rounded sensitive tip is easy to angle and doesn't dig into your tummy

Soft cup holds and protects the Doppler

Large high quality speaker allows the entire family to easily hear the heart-beat in home settings

Non skid legs keep it on the night stand or table

## Why a home doppler?

- An excellent way to measure fetal well being earlier in pregnancy
- Increase bonding between baby and mother, siblings, father, other family members
- Reassure and reduce stress of mother when she is not feeling fetal movements
- New surveys show that using a quality Doppler will actually reduce calls from mothers concerned about fetal well being

## Why *this* home doppler?

Best in Class Product - Sensitive, high quality 3 MHz Doppler made and supported in the USA. Sound quality and sensitivity comparable to – or in some cases exceeds – Dopplers used in obstetrical offices.

Management History - We have been providing outstanding Dopplers to the U.S. obstetrical market since 1976. Our design, manufacturing, and customer service departments are based in a Chicago suburb so we can take care of customer questions or concerns immediately.

FDA Compliance - Fetal Dopplers have output powers regulated by the FDA. There are cheap imported Dopplers available today, but according to recent reports, even though these products may have done the paperwork to get imported, virtually no overseas manufacturer of these products has actually been inspected by the FDA. With issues like lead in toys and melamine in milk from China, why take a chance on an imported unit?

## Incredible Reassurance

### You Can Call Us

Newman Medical facilities are located in Lake Bluff Illinois. These offices contain sales and marketing, research and design, manufacturing, and supply operations. Most importantly, this is also the epicenter of our customer service. We may be the only home use Doppler manufacturer with customer service here in the U.S. As part of medical device manufacturing, Newman Medical has established and implemented FDA compliant manufacturing and quality control processes.

### Avoiding the dreaded two week wait.

Many mothers surveyed have related this story – the baby is suddenly less active than it has been, or they can't feel any movement at all. Their next appointment is two weeks away. What if there is something wrong – do they just wait? With a Doppler they can get much more information. If the heart is heard loud and strong, an unnecessary visit and/or call may be avoided. Mothers deserve every reassurance they can get, and many feel hearing the miracle of their baby's heart beat is one of the best things of their pregnancy.

Many of the thousands of families that have used a Doppler at home have done so because they have had high risk pregnancies. They have had problems, perhaps even miscarriages before. A Doppler lets them check on fetal well being. Obstetrical care providers already are using measurements of fetal well being such as counting fetal movements and kicks, a Doppler is a logical extension of this trend.

### Specifications

Probe Size: 172 x 44 x 50 mm

Speaker Size: 117 x 115 x 135 mm

Weight: 370 grams (13 ounces)

Batteries: Standard AAA Alkaline

Battery Life: Approx. 600 minutes

LCD heart rate display – 50 to 200 beats per minute

Warranty – one year to original purchaser
